ABOUT ME

I am a Senior Software Developer based in Berlin, Germany. As a full-stack developer, I'm experienced in building scalable and maintainable backend APIs and specialise in web application development. I've led and participated in the complete product development lifecycle of several successfully launched and well-received SaaS mobility products. I am passionate about solving complex problems using web technologies, mentoring teammates and sharing knowledge. Currently looking for new opportunities with focus on front-end roles.

EXPERIENCE

Engineering Manager

door2door GmbH, Berlin DE | Oct 2021 - Present

- Manage and mentor two team members and actively support their learning and career growth through regular 1:1s, setting OKRs, performance reviews, regular pair-programming sessions and in-depth code review feedback

Tech Lead

door2door GmbH, Berlin DE | Apr 2021 - Sep 2021

- Led a temporary cross-functional feature team consisting of three full-stack developers, a design lead and a product manager, formed with the goal to build an instant prebooking functionality for door2door's ridesharing platform
- Developed the product and technological vision, defined and negotiated product scope, outlined a 6-month roadmap with milestones and deliverables, and facilitated the technical implementation through technical proposals and hands-on coding

Senior Software Developer

door2door GmbH, Berlin DE | Feb 2020 - Present

- Leading and coordinating the complete lifecycle, from product definition and acceptance criteria, through implementation and quality assurance to client rollout of full-stack features in the ride-sharing platform
- Drafting proposals, creating technical and non-technical documentation
- Negotiating feature scope with product representatives and stakeholders, coordinating execution of work items with product and design counterparts

Software Developer

door2door GmbH, Berlin DE | Oct 2017 - Jan 2020

- Contributed to and led the development of full-stack features across the ride-sharing platform
- Acted as the topic and technical owner of several large-scale product features and new web products, such as the ride-sharing Phone Booking application, which is part of door2door's standard offering
- Main contributor to door2door's React-based design system components library (design.door2door.io)
- Supported on-call rotation and responded to system incidents
- Mentored interns in web development

Software Development Trainee

door2door GmbH, Berlin DE | Oct 2016 - Sept 2017

- Developed a real-time analytics component as part of door2door's ride-sharing platform, including infrastructure, data-processing pipelines, backend microservices and frontend data visualisations
- Implemented a fully-automated theming template for white-labelling client websites, thus accelerating client launches

Software Development Intern

door2door GmbH, Berlin DE | Mar 2016 - Sept 2016

- Responsible for the implementation and maintenance of all web presence of the company, including the corporate website and various product websites;
- Led the consolidation of all content-based websites to a unified technology stack

EDUCATION

2013 - 2017 • B.Sc. International Media and Computing
Hochschule für Technik und Wirtschaft Berlin, DE
